## Screen for Communicable Illnesses Form Changes - A new field has been added to the form to designate TB Result Status. The form is now a draft/final form that can be saved in draft status as needed.

Effective July 9th, a new field **TB Result Status** is available on the Screen for Communicable Illnesses Form. TB Result Status should be used to indicate that the result of a TB test (PPD <u>or</u> QuantiFERON blood test) is either *Pending* (waiting for results) or *Completed* (results have been documented in the patient's chart). Select the appropriate button to indicate the status of the TB result. Inpatient QuantiFERON testing can be documented in the Comments section.

The form can be saved in draft status to complete later, if necessary.
